Rapid ECG Interpretation

Salient Features

- Presents a unique 11-step method for accurate and rapid ECG interpretations in a user-friendly synopsis format
- It is thoroughly revised and updated
- Includes the latest updates of ECG interpretation along with its importance in assessments of various abnormalities such as ST-segment elevation and also an addition of chapter on enhancing ECG quality
- Provides different diagnostic ECG criteria with relevant and instructive ECGs that act as ready-reckoner for proficiency tests and also helpful for physicians who are preparing for the Cardiovascular Diseases Board Examination
- The significant information are presented through a succinct writing style and highlighted with bullets
- The practical aspects of the book help the clinicians and senior residents for accurate interpretations of the ECG associated with cardiovascular diseases.

M Gabriel Khan MD FRCP (London) FACC FRCPC MB BCh (Queen's Belfast) is Former Associate Professor, Department of Medicine and Division of Cardiology, University of Ottawa; and Cardiologist, The Ottawa Hospital (1968–2017), Ottawa, Ontario, Canada. His recent research culminated in a novel discovery that should save the lives of many diabetics who die because of heart stroke. He emphasized that sitosterol causes atheromatous blockage of arteries. He is the first investigator to show that diabetics have high blood sitosterol. He has become an internationally acclaimed cardiologist through his writings: *Cardiac Drug Therapy, Internal Medicine: Diagnosis and Therapy, Practical Cardiology, Heart Disease: Diagnosis and Therapy, On Call Cardiology,* and *Encyclopedia of Heart Diseases*.
