# Contents

**1. Basic Anatomy and Physiology of Human Brain ..... 1**
Anatomy of the head 1
The major regions of the brain and their functions 4
The cerebral circulatory system 7
The neonatal brain 9
Aspects of neuroanatomy and physiology 10

**2. The development of nervous system ..... 17**
Development of movement, posture and developmental neurology 17
Neonatal reflexes 21
Discussion of developmental sequences and its importance in treatment planning of the patient 23
The clinical value of knowledge of developmental sequence 27

**3. Clinical Aspects of Stroke: A Major Cause of Hemiplegia ..... 29**
Definition 30
Types of stroke 30
Less frequent causes of stroke 32
The stroke-prone population 33
Risk factors for Cerebrovascular disease 34
Causes of ischemic stroke 35
Threatened stroke 36
Stroke mimics 38
Stroke in the young Indian population 38
Other unusual causes of stroke in children 38
Stroke with atypical presentation 39

**4. Clinical Diagnosis of Neurological Condition ..... 41**
Bedside assessment of stroke 41
Neurological case history 42
The neurological examination 43
Physical examination 44
Neurological examination and stroke scale scores 45
Diagnostic tests 45
Further tests 46

**5. Symptoms of Brain Damage ..... 49**
CNS disorders and Brodal's passage 49
Sites of lesion and clinical manifestation 53

Signs and symptoms and structures involved 54
Sequential stages 60
Alterations in tone of the muscles 61
Loss of selective movement 62
Synergy patterns 63
Reflexes 63
Weakness 65
Incoordination 66
Dystonia 66
Motor programming deficits 67
Functional abilities 67
Speech and language disorders 68
Perceptual deficits 68
Cognitive and behavioral changes 69
Bladder and bowel dysfunction 71
Orofacial dysfunction 71
Patterns of behavior in right and left brain 72
Secondary impairments 72
Recovery from stroke 76

**6. Essentials of Assessment ..... 77**
Physical therapy assessment 77
Assessment of normal postural reflex mechanism 84
Short assessment and treatment planning
for adult hemiplegia (Bobath assessment form) 86

**7. Management and Rehabilitation Medicine ..... 98**
Medical management 98
Philosophy of rehabilitation medicine 99
Areas of Rehabilitation 101
Aspects of rehabilitation 102
Impairment, disability and handicap 102
Rehabilitative management 103
The rehabilitation team 104
Ethical value system in patient care 109

**8. A Systematic Approach to Treatment ..... 110**
Approach to treatment 110

**9. Treatment Program in Acute Stage ..... 139**
During NICU and TCU stay 139
Pulmonary or chest physiotherapy 141
Positioning 143
Passive range of motion exercises 148
Range of motion and prevention of limb trauma 150
Start with the midline 152
Do's and Don'ts 153

**10. Activities in Lying ..... 155**
Brushing 155
Icing 156
Connective tissue release 156
Neural tissue stretch 160
Sustained stretch 161
Pressure over body parts 162
Selective trunk activity 163
Correction of anterior chest position in lying 164
Rib cage alignment 165
Mobilization of thorax 165
Mobilizing the arm 166
Proprioceptive neuromuscular facilitation (PNF) pattern activities 169
Side-lying activities 170
Scapular mobilization 172
Activation of lower trunk 180
Lower extremity control 187
Elongation of trunk and pelvic clock exercises 194
Use of the ball in training lower limb and trunk in lying 197

**11. Activities in Sitting ..... 200**
Training of lying to sitting using trunk 200
Sitting from side-lying 201
Sitting in the bed 202
Moving sideways in sitting 202
Transfer activities 203
Upper extremity control 204
Control of quadriceps in long sitting 205
Inhibition of extensor thrust 206
Weight shifts in high sitting 207
Simultaneous activation of upper limb and trunk 208
Weight-bearing through upper extremities 210
Upper extremity placing 211
Dynamic balance reactions 212
Moving lower limb 214
Weight shift on elbows, sideways 215
Sitting in the chair 215
Weight transference on affected upper limb with reachouts 216
Moving in sitting position 217
Weight transference through the arms behind 218
Neck stretching 218
Activation of wrist extensors 219
Shoulder activities 220
Preparation for hand activity 221
Forearm supination and elbow flexion 223
Shoulder external rotation activities 224

Use of elastic band in applying resistance 224
Use of a ball in applying resistance 225
Use of stretch reflex 227
Use of bilateral upper limb activities 228
Moving the hand 229
Activities on vestibular ball 231
Foot movements 241
Activities on mat 242
Training for dorsiflexion of foot 245
Specific activities for patients with sensory involvement 245
Activities for recovering arm 250
Functional training 253

**12. Activities in Standing ..... 255**
Training from sitting to standing 255
Pelvic alignment in standing 259
Unilateral weight bearing 260
Assisted activities with the help of a table 261
Step-up activities 264
Weight bearing on the affected leg 265
Training plantar flexion 267
Training selective knee flexion in standing 268
Dynamic activities for lower limb control and gait 269
Stairs 280
Dynamic balance activities 281
PNF wood chopping 285
Upper limb activation 285
Obstacle walking 292
Strengthening exercises using resistive tubing 293
Advanced functional training 295
Group therapy 297

**13. Proprioceptive Neuromuscular Facilitation (PNF) Activities ..... 294**
Flexion—abduction—external rotation 298
Flexion—abduction—external rotation with elbow extension 299
Flexion—adduction—external rotation with elbow flexion 300
Flexion—adduction—external rotation with elbow extension 300
Extension—abduction—internal rotation with elbow extension 301
Bilateral symmetrical: Flexion—abduction—external rotation 302
Bilateral asymmetrical: Flexion—abduction—external rotation with the right arm; flexion—adduction—external rotation with the left arm 302
Flexion—abduction—external rotation at end ranges, lying prone on elbows 303
Flexion—abduction—internal rotation 303
Flexion—abduction—internal rotation with knee flexion 304
Flexion—abduction—internal rotation with knee extension 304

Extension—adduction—external rotation 305
Flexion—adduction—external rotation with knee flexion 305
Flexion—adduction—external rotation with knee extension 306
Extension—abduction—internal rotation 307
Extension—abduction—internal rotation with knee extension 307
Extension—abduction—internal rotation with knee flexion 308
Bilateral symmetrical leg patterns: Flexion—abduction with knee extension in sitting 308
Bilateral asymmetrical patterns: Flexion—abduction with knee extension on the left; extension—abduction with knee flexion on the right 309
Bilateral symmetrical pattern in supine—flexion—abduction 309
Leg patterns in sitting: Extension—adduction with knee flexion 310
Leg patterns in sitting: Extension abduction with knee flexion 310
Flexion—adduction with knee extension 311
Patterns of trunk 311
Bilateral leg patterns for trunk in lying 312
Bilateral leg patterns for trunk in sitting 312
Combining patterns for the trunk 313
Resistive patterns on mat 313

**14. Orofacial Rehabilitation ..... 314**
Respiratory and oromotor activities 314
Muscles of facial expressions 315
Stimulation of lips and oral cavity (Vibration and icing) 319
Resisted tongue movements 321
Chewing and deglutition 322
Activities for coordination of eye movements 323

**15. Perceptual Dysfunctions and Treatment ..... 326**
Somatosensory dysfunction 326
Perceptual disabilities: Site and side of lesion 327
Body scheme and body image disorders 329
Unilateral visual or spatial neglect 330
Right-left discrimination 333
Finger agnosia 334
Anosognosia 334
Spatial relations deficits 335
Agnosia 342
Apraxia 344
Cognitive dysfunction 350
Strategies to improve communication in a patient having speech disorder 352
Therapeutic guiding techniques 352

**16. Complications and their Management ..... 354**
Shoulder pain 354
The subluxated shoulder 355
Shoulder hand syndrome (reflex sympathetic dystrophy) 357
Fractures 358
Thalamic pain syndrome 358
Outburst of laughing and crying 359
Tightness-contractures-deformity 359
Pusher's syndrome 360

**17. Adjunct Therapies ..... 362**
Biofeedback 362
Electrical stimulation 363
Isokinetics 365
Music as therapy 366
Exercise conditioning 366
Robotics and computer-aided therapy 367
Constraint-induced therapy 368
Motor relearning 368
Hydrotherapy 369
Orthosis in hemiplegia 370
Botulinum injections for spasticity 375
Other allied therapies 382

**18. Hemiplegia Care at Home ..... 384**
Merits of home treatment 384
Demerits of home treatment 385
Treatment plan 386
Problems associated with home-based treatment 386
Suggested solutions 389
Physiotherapist 390

**19. Orthopedic Management of Stroke ..... 397**
Evaluation 398
Management of spasticity during the period of physiologic recovery 400
Management of residual deformities 403
Commonly seen residual deformities and their management 404
Author's perspective 416

**20. Conclusion ..... 417**
Place where initial physiotherapy was carried out 418
Physiotherapy to be carried out by qualified physiotherapist 419
Involvement of rehabilitation professionals other than physiotherapist 419
Awareness about helpfulness of rehabilitation professionals 420
Satisfaction with rehabilitation 420
Awareness about different physiotherapy techniques amongst patients 421
Sexual functions in hemiplegics 422
Psychological aspects of hemiplegia 423

Social functions 424
Spirituality and faith 426
Work and profession 427
Functional recovery 428
An ideal rehabilitation of a person suffering from hemiplegia 429

**21. Assessment Scores and Scales ..... 434**
ABCD score 434
The Barthel index 435
Beck's depression inventory 437
Berg balance scale 440
The European stroke scale 443
Family assessment device 447
The Frenchay activities index 453
Geriatric depression scale (short form) 454
Glasgow coma scale 455
Hemispheric stroke scale 456
Hunt and hess scale 461
Mathew stroke scale 462
Mini-mental state examination (MMSE) 464
Modified Rankin scale (MRS) 466
Motor assessment scale 467
Motricity index 471
NIH stroke scale 472
Orgogozo stroke scale 475
Rivermead mobility index 478
Scandinavian stroke scale 480
Tinetti balance assessment tool 482
The trunk control test for motor impairment after stroke 484
Stroke impact scale 485
Functional independence measure (FIM) 489
Berg balance 490
The rehabilitation index 490
