Contents

1. Introduction to Geriatric Physiotherapy 1

- Definition of Elderly 1
- Classification of Elderly 2
- Demography of Aging 2
- Factors Responsible for Demographic Changes 3
- Implications of Demographic Changes 4
- Sex Distribution and Marital Status of Elderly 4
- Socioeconomic Status of Elderly 4
- Disease, Disability and Death 5
- To Summarize 5

2. Physiological Response to Aging 7

- Normal Aging 8
- Mechanism of Aging 8
  - — Theories of aging based on intrinsic factors 8
  - — Theories of aging based on extrinsic factors 8
- Features of Normal Aging 9
  - — Musculoskeletal system 9
    - – Muscular strength 9
    - – Muscle mass 9
    - – Muscular endurance 10
    - – Muscular power 10
    - – Bone health 10
    - – Articular cartilage 11
  - — Cardiovascular system 12
    - – Aerobic capacity 12
    - – Heart 12
    - – Heart rate 12
    - – Cardiac output 12
    - – Local factors 13
  - — Pulmonary function 13
  - — Nervous system 13
    - – Central nervous system 13
    - – Peripheral nervous system 14
  - — Special senses 15
    - – Visual acuity 15
    - – Hearing 15
    - – Taste 16

– Smell 16
– Touch 17
— Vestibular system 17
— Changes in other systems 17

3. Physiological Response to Exercise in Elderly 22
• Cardiovascular System 22
• Respiratory System 23
• Musculoskeletal System 24

4. Principles of Geriatric Assessment 27
• Aims of Geriatric Assessment 27
• The Team for Geriatric Assessment 28
• Efficiency of Geriatric Assessment 28
• Components of Geriatric Assessment 29
— History taking 29
— Physical examination 30
— Functional status 30
— Mental status 31
— Emotional status 31
— Laboratory testing 31

5. Principles of Geriatric Physical Therapy 33
• Aims of Geriatric Assessment 33
• Geriatric Physical Therapy in Different Settings 34
— Geriatric physical therapy in acute care hospitals 34
— Geriatric physical therapy in skilled nursing facilities 34
— Geriatric physical therapy at home 34
— Geriatric physical therapy in outpatient departments 34
• Geriatric Physical Therapy Program 34
— Assessment 35
— Goal-setting 35
— Therapeutic intervention 35
– Range-of-motion exercise 36
– Stretching exercise 38
– Mobilization exercise 39
– Strengthening exercise 40
– Aerobic exercises 43
– Gait training 47
– Orthotics 49
– Electrotherapeutic modalities 54
— Reassessment 63

6. Cardiorespiratory Disorders in Elderly 65
• Cardiovascular Disorders in Elderly 65

— Acute myocardial infarction 65
— Coronary heart disease 68
— Arrhythmias and conduction disturbances 70
— Hypertension 73
— Congestive cardiac failure 76
• Respiratory Disorders in Elderly 78
— Chronic obstructive pulmonary disease 78
— Asthma 82
— Pulmonary embolism 84

7. Musculoskeletal Disorders in Elderly 87
• Osteoporosis 87
• Osteoarthritis 93
• Rheumatoid Arthritis 98
• Gout Arthritis 101

8. Falls in Elderly 105
• Definition 105
• Prevalence 105
• Risk Factors 106
• The Role of Balance Control 106
• Age-related Changes in Balance and Gait Pattern 107
• Assessment and Evaluation 108
• Treatment 109

9. Neurological Disorders in Elderly 114
• Stroke 114
• Parkinson's Disease 126
• Peripheral Neuropathy 135

10. Diabetes in Elderly 138
• Definition and Classification 138
• Prevalence 138
• Risk Factors 139
• Clinical Features 139
• Diagnostic Criteria 139
• Additional Laboratory Findings 140
• Management 140
• Mortality Rate 142
• Diabetic Complications 142

11. Cognitive Deficits and Dementia in Elderly 147
• Introduction 147
• Definition and Description of Key Terms 147
• Prevalence 148

- Causes of Dementia 148
- Clinical Features 149
- Evaluation and Assessment 150
- Management 151

Appendices 155

I Activities of Daily Livings (ALDs) 155
II Instrumental Activities of Daily Livings (IADLs) 156
III Modified Performance-Oriented Mobility Assessment (POMA) 157
IV Mini-Cog Assessment Instrument 160
V Geriatric Depression Scale (GDS) 161
VI Physical Therapy Evaluation Performa for Geriatric Patients 162
VII Dynamic Gait Index 164
VIII Wisconsin Gait Scale (WGS) 168
IX Parkinson's Disease Evaluation Form 170
