Contents

1. **Introduction** *1*
   Response of tissue, Anxious patient, Operation, Tips to dentists, Premedication, Anesthesia, Indications for extraction, Contraindications, Local conditions, Systemic conditions, Clinic and instruments required for oral surgery/exodontia.

2. **Armamentarium/Instruments** *13*
   Different types of instruments used in exodontia and care of instruments, Varieties of dental chairs, units, etc.

3. **Sterilization of Instruments/Equipments** *25*
   Sterilization, Autoclaving, Boiling, Dry heat sterilization, Chemical sterilization, Gas sterilization, Chemical vapors sterilization, Radiation sterilization, General observations regarding sterilization.

4. **Operation Room Decorum** *41*
   Scrubbing, Isolation of the patient from the operative team.

5. **Antibiotics** *49*
   Goal of administration, Host defense mechanism, Penicillin group (Erythromycin, Cephalosporin group (generations), Trimethoprim-sulfamethoxazole, Metronidazole, Chloramphenicol, Nystatin, culture/sensitivity test, Choice of antibiotic,

Narrow and broad spectrum antibiotics, Bacteriocidal and bacteriostatic antibiotics, Monitoring the patient's response, Indications, Contraindications of antibiotic therapy, Use of prophylactic antibiotics, Prevention of wound infection, Infective organism and antibiotic sensitivity, Dozes of antibiotics during surgery, Prophylaxes of wound infection, Prevention of metastatic infections (Subacute-bacterial-endocarditis, (SBE)), American dental association and American Heart society's recommendations.

6. Analgesics (Pain killers) *87*

Analgesics and antipyretics, aspirin, salicylamide, sodium salicylate.

- Amino phenol derivatives; Paracetamol.
- Trigeminal neuralgia; carbamazepine.
- Some commonly used drugs of this group.
- NSAID's; ibuprofen, Nimesulide,
- Serratiopeptidase, ibuprofen+Paracetamol, .. carisopodol+ibuprofen.
- Warning.

7. General Outlines for Exodontia *99*

Anesthesia, Position of the chair, Preparation and draping, Position of hand of the operator, Extraction with forcep. After extraction care of the patient, Order of extraction.

8. Anesthesia Used for Exodontia *109*

Factors on which choice of anesthesia depends, age and physical status of the patient, nature and duration of operation, emotional status of the patient, drug allergy.

9. **Forcep Extraction of Individual Tooth** *123*
Maxillary central incisors (11, and 21), Maxillary lateral incisors (12 and 22), Maxillary canines (13 and 23), Maxillary premolars (14, 15 and 24, 25), maxillary molars (16, 17, 18 and 26, 27, 28). Mandibular incisors and canines (31, 32,33 and 41, 42, 43), Mandibular premolars (34, 35 and 44, 45), Mandibular molars (36, 37, 38, and 46, 47, 48).

10. **The Surgical Flap** *171*
Indications, Flap design principles, Verities, Procedure.

11. **Complicated Exodontics** *179*
Alveoloplasty.

12. **Removal of Broken/Chipped/Residual Roots of the Teeth** *191*
Maxillary roots, Mandibular roots, open-reduction, Residual roots.

13. **Principles of Elevators** *205*
Verities and use (straight, winter, apexo-leaver, etc. elevators).

14. **Impactions** *215*
Cover of antibiotics, Ossisection of bone, Preparation of the operator and the patient, Classification of mandibular third molar impactions, Mesioangular impaction, Vertical impaction, Horizontal impaction, Disto-angular impaction, Cautions while operating Maxillary impactions, Maxillary disto-angular impaction, Maxillary mesio-angular impaction, Maxillary

vertical impaction, Maxillary canine impaction (palatal, lateral, intermediate types), Impacted supernumeraries.

15. Removal of Deciduous Teeth *285*
Indications. Anesthesia, When to operate, Technique.

16. Emergencies in Dental Clinic *291*
General considerations, Syncope, Delayed reactions, Teeth displaced to oropharynx, Removal of teeth under general anesthesia, Hospitalization of patients, Management of acute infected tooth, Complications of exodontia, Post operative/ extraction complications.

17. Complications of Exodontia *303*
Hemorrhage, Dry socket.
