Contents

1. Introduction to Operative Dentistry 1

Definition
History
Scope of Operative Dentistry
- *Need for Operative Dentistry*
- *Conservative Approach*
- *Dynamics of Operative Dentistry*

2. Basic Principles in Operative Dentistry 3

Ergonomics in Dentistry
Equipments in Dental Environment
Protection and Safety Precautions

3. Clinical Decisions in Operative Dentistry 18

Examination of Dentition—Occlusion
Examination of Dentition—Dental Charting

4. Isolation of Operating Field 57

Moisture Control
Local Anesthetics

5. Dental Anatomy, Physiology, Histology and Occlusion 66

Structure of Teeth
- *Enamel*
- *Pulp-dentin Complex*
- *Cementum*

Dentitions
- *Incisors*
- *Canines*
- *Premolars*
- *Molars*

Occlusion
- *Tooth Alignment in Arches*
- *Movement of Mandible*
- *Tooth Contacts During Movement*

6. Cariology 114

Definition
Etiology
Pathophysiology
Classification of Caries
Caries Diagnosis and Preventive Treatment

7. Fundamentals in Tooth Preparation 130
Definition
Need for Tooth Preparation
Objectives of Tooth Preparation
Terminology in Tooth Preparation
Classification of Tooth Preparation
Fundamental Steps in Tooth Preparation

8. Instruments and Equipment Used for Diagnosis, Tooth Preparation and Restoration 155
Terminology
Development and History of Instruments
Classification of Instruments
Instrument for Diagnosis
Hand Cutting Instruments
Hand Instrument Techniques
Sharpening Hand Cutting Instruments
Rotary Instruments
Other Instruments for Caries Removal
Auxillary Instruments and Equipments

9. Infection Control 194
Environment in Dental Lab
Regulatory Body Stipulations
Overview of Asepsis Techniques
Sterilization
Dental Water Unit and Hand-pieces Sterilization

10. Preclinical Conservative Laboratory Exercises 223
Fabrication, Care and Preparation on Plaster Models
Extracted Teeth for Operative Dental Procedures
Care and Disinfection of Extracted Teeth
Dental Simulators for Operative Dental Procedures

11. Amalgam Restorative Material 232
Alloy Composition
History of Amalgam
Metallurgical Phases and Amalgam Crystallization Reaction
Properties of Amalgam
Manipulation of Amalgam
Mercury Toxicity
Amalgam Waste Management
Recent Advances in Amalgam

12. Amalgam Class I Preparation and Restoration 247
Preparation Sequence
Restoration
Designs

13. Amalgam Class II Preparation and Restoration 259
Preparation Sequence
Restoration
Designs

14. Amalgam Class III Preparation and Restoration 299
Preparation Sequence
Restoration
Designs

15. Amalgam Class V and VI Preparations and Restorations 304
Preparation Sequence
Restoration
Designs

16. Bonding 310
Types of Bonding
Clinical Applications of Bonding
Enamel Etching and Bonding
Dentin Bonding
Philosophy of Dentin Bonding
Classification of Dentin Bonding Agent
Hybridization Amalgam Bonding
Ceramic Bonding Resin-metal Bonding
Biocompatability and Microleakage

17. Resin Composite Restorative Material 327
Evolution and History of Composites
Composition of Dental Composite Resin
Classification of Dental Composite
Curing of Composite
Reduction of Polymerization Stresses
Properties of Composite
Indirect Composite
Finishing of Composite
Biocompatability of Composite
Repair of Composite Restoration

18. Composite Restoration Class I to VI 342
Indications and Contraindications
Advantages and Disadvantages
Basic Preparation Design
Preparation Sequence

19. Direct Filling Gold Restoration 367
Direct Filling Gold Material Properties
Tooth Preparation Sequence and Design
Restoration

20. Pin Retained Amalgam Restoration 379
Types of Pins
Factors Affecting Pin Placement
Pin Retention in Dentin and into Restorative Material
Tooth Preparation and Pin Placement
Mishaps During Pin Placement and in Pin Retained Restorations
Alternative to Pin Retention for Amalgam Restoration

21. Class II Inlay Restoration 393
Indications and Contraindications
Materials Used for Restoration
Tooth Preparation Sequence
Restoration

22. Cast Onlay Restoration 421
Indications and Contraindications
Tooth Preparation Sequence

23. Tooth Colored Inlays and Onlays 425
Indications and Contraindications
Tooth Preparation Sequence and Design
Advantages and Disadvantages
Materials Used in Tooth Colored Inlays and Onlays
CAD / CAM Restorations

24. Glass Ionomer Restoration 434
Glass Ionomer Cement
Clinical Application of Glass Ionomer Cement
Modifications in Cavity Design for Glass Ionomer Cement
ART Technique
Sandwich Restoration

25. Minimal Invasive Dentistry 442
Introduction to Minimal Cavity Preparation
Cavity Design Principles
Newer Cavity Classification

26. Noncarious Cervical Lesions 446
Types of Noncarious Cervical Lesion
Clinical Features
Diagnosis
Treatment Options
Restorative Materials Used in Noncervical Carious Lesion
Preparation Design

27. Esthetic Operative Dental Procedures 451
Veneers
Types of Veneers
Indications and Contraindications for Veneers
Tooth Preparation Design
Advantages and Disadvantages of Veneers

Bleaching
Etiology of Tooth Discoloration
Tooth Color
Advantages and Disadvantages of Bleaching
History of Bleaching
Types of Bleaching
Constituents of Bleaching Agents
Alternatives to Bleaching
Microabrasion / Macroabrasion
Indications and Contraindications
Advantages and Disadvantages
Clinical Technique

28. Additional Considerations in Operative Dentistry 470
Dentinal Hypersensitivity
Definition
Etiology
Mechanism of Dentinal Hypersensitivity
Management in Dentinal Hypersensitivity
Management of Gingival Tissues
Indications for Gingival Management
Methods of Gingival Retraction
Newer Methods of Gingival Retraction
Comparison of Different Gingival Retraction Methods

29. Endodontics 479
Introduction to Endodontics
Root Canal Treatment
Indications of Root Canal Treatment
Incisors Root Anatomy
Steps in Root Canal Treatment
Access Cavity Preparation
Working Length Determination
Biomechanical Preparation of Root Canal
Obturation
Access Cavity Restoration

30. Endodontic Materials and Instruments 498
Pulp Capping
Root Canal Filling Materials
Root Canal Sealers
Post and Core
Root Canal Instruments
