Contents

1. Introduction To Nursing Research

Research 1
Goals of Research 1
Research Terminology 1
Variables 2
Types of Variables 2
Conceptual Definition 3
Operational Definition 3
Data 4
Relationships 4
In quantitative studies 4
In qualitative studies 4
Nursing Research 5
Importance of Research in Nursing 5
Scope of Nursing Research 5
Consumers of nursing research 6
Producers of nursing research 6
Other activities on the continuum 6
Historical Evolution of Research in Nursing 7
NCNR–National center for nursing research 8
Future Directions for Nursing Research 9
Heightened focus on EBP 9
Development of a stronger evidence-base through more rigorous methods and multiple, confirmatory strategies 9
Greater emphasis on systematic integrative review 9
Expanded local research in health care setting 9
Strengthening of multidisciplinary collaboration 10
Expanded dissemination of research findings 10
Increasing visibility of nursing research 10
Increasing focus on cultural issues and health disparities 10
Paradigms for Nursing Research 11
Positivist paradigm 11
Major concepts 11
The naturalistic paradigm 12
Important Points to be Noted 14

Global Nursing Priorities 14
Purposes of Nursing Research 15
Purposes of Quantitative Research 16
Purposes of Qualitative Research 16
2. Evidence-based Practice 17
Sources of Evidence for Nursing Practice 17
Tradition and authority 17
Clinical experience 18
Trial and error 18
Intuition 18
Logical reasoning 18
Assembled information 19
Disciplined research 19
Evidence-based Practice (EBP) 19
Nature of EBP 20
Research Utilization 21
Need for research utilization 21
Advantages of research utilization 21
Types of research utilization 22
EBP in Nursing 22
Resources for EBP 23
Systematic reviews 23
Clinical practice guidelines 24
Other pre-appraised evidence 24
Research Findings on EBP 24
Factors Influencing Research Utilization 25
Organizational factors 25
Barriers to Research Utilization 25
Nature of disseminated research studies 25
Characteristics of the clinician 26
Nurse researcher characteristics 26
The health care agency administration 26
Research Critique 27
Purposes of research critique 27
Dimensions of research critique 28
Broad dimensions of research critique 28
Overall Critique of Research 29
Quantitative research report 29
Qualitative research report 30
EBP in Individual Nursing Practice 30

3. Theoretical Bases For Nursing Research 32
Theory 32
Importance of Nursing Theories 32
The Stability Model of Change 33
General Systems Theory 33
Imogene King's model/Theory of goal attainment 34
Purpose of nursing 35
Major concepts in King's model 36
Ten key concepts of King's theory 37
Betty Newman's Health Care Systems Model 37
Key concepts 38
Calista Roy's Adaptation Model 40
Sister Callista Roy's adaptation model 41
Key concepts in Roy's model 41
The Growth Model of Change 43
Caring theory as a framework 44
Orem's Self-care Deficit Theory 44
Orem's three-part nursing theory 45
Universal self-care requisites 46
Self-care deficit theory promotes care at following levels 46
Complexity theory as a framework 46
Martha Roger's Science of Unitary Beings 47
Three principles of change 48
Rosemarie Parse's Human Becoming Theory 49
Three implications for practice 50
Margaret Newman's Theory of Health as Expanding Consciousness 51

4. Ethical Issues in Research 53
Main Issues of Concern 53
Code of Ethics 53
Articles Adapted from the Nuremberg Code 54
Ethical Dilemmas 54
Ethical Principles 55
Beneficence 55
Respect for human dignity 56
Justice 57

5. Research Designs 59
Types of Research 59
Characteristics of Quantitative Studies 59

The Counter Factual Model 61
Criteria for causality 61
Experimental design 61
Properties of RCT 62
Manipulation 62
Manipulation of the experimental intervention 62
Manipulation of the control condition 63
Randomization 64
Principles of randomization 64
Randomization procedures 64
Randomization variants 65
Masking or blinding 66
Types of Experimental Research Designs 66
Strengths of experiments 68
Limitations of experiments 69
Quasi-experiments 69
Types of quasi-experimental designs 69
Single subject experiments 71
Nonexperimental Research Designs 72
Types of nonexperimental research designs 73
Strengths of nonexperimental research 76
Limitations of nonexperimental research 76
Clinical Trials 76
Phases of full clinical trial 77
Drawbacks of clinical trials 78
Sequential Clinical Trial 78
Steps of sequential clinical trial 78
Strengths of sequential clinical trials 79
Practical Clinical Trials 80
Recommendations for pragmatic clinical trials 80
Nursing Intervention Research 81
Definition 81
Phases of nursing intervention research 81

6. Qualitative Research 85
Grounded Theory 85
Phenomenology 85
Ethnography 85
Activities in a Qualitative Study 86
Characteristics of a qualitative study 87
Disseminating qualitative findings 89

7. Quantitative Research 90
Experimental Research 90
Nonexperimental Research 90
Steps in a Quantitative Study 91
Phase I: The conceptual phase 92
Phase II: The design and planning phase 93
Phase III: The empirical phase 95
Phase IV: The analytic phase 95
Phase V: The dissemination phase 96

8. Noninterventional Research Designs 97
Types of Noninterventional Research 97
Outcome research 97
Survey research 98
Delphi surveys 100

9. Sampling 102
Definitions 102
Sampling Techniques 103
Types of Non-probability Sampling 103
Convenience sampling 103
Snowball sampling 104
Purposive sampling 105
Evaluation of non-probability sampling 105
Measures to enhance the representativeness 106
Probability Sampling 106
Types of probability sampling 106
Evaluation of probability sampling 109
Implementing a sampling plan in quantitative studies 109
Sampling in Qualitative Research 111
Types of qualitative sampling 111
Convenience sampling 112
Snowball sampling 112
Purposive sampling 113
Regarding sampling the researcher's must know: 115
Theoretical sampling 115
Sampling in ethnography 115
Sampling in phenomenological studies 116
Sampling in grounded theory studies 116
Critiquing sampling plans 117
Critiquing quantitative sampling plans 117
Critiquing qualitative sampling plan 118

10. Pilot Study and Data Collection 119
Types of Data 119
Unstructured data collection 119
Structured data collection 119
Purposes of biophysiologic measures 120
Pilot Study 120
Characteristics 120
Objectives 121
Significance/advantages of pilot study 121
Data collection plan 122
Determinants of data requirement 123
Criteria affecting selection of instruments 123
Factors that contribute to error of measurement 123
Measure of quality of data collection tool/instruments 124

11. Biostatistics 126
Definition 126
Characteristics of Population 126
Applications of Statistics 127
Types of Data 128
Based on characteristic 128
Based on source 128
Based on field 128
Based on contents 128
Difference in 4 data types 129
Need to Identify the Type of Data 129
Common Symbols Used In Statistics 129
Sources of Data 130
Problems in Data Collection 131
Prevention of Errors and Mistakes 132
Precautions in Data Collection 133
Compilation of Data 134
Data Editing Techniques 134
Frequency Distribution 134
Data Presentation 135
Methods of data presentation 135
Tabular presentation of data 135
Types of tables 135
Graphical presentation of data 137
Precautions in pictorial presentation 137

Types of graph 137
Bar graph or bar chart or bar diagram 138
Proportionate bar chart 139
Pie diagram or pie chart 139
Histogram 140
Frequency polygon 140
Line diagram 140
Proportionate line diagram 141
Scatter diagram 142
Pictogram 142
Spot map 143
Epidemic curve 144
Measures of Central Tendency 144
Merits of Centering Constants 144
Mean 145
Median 146
Mode 147
Relation between mean, median and mode 147
Collection of Demographic Data 148
Population Census 148
Uses of a population census in health matters 149
Life Table 149
Uses and Application 149

12. Computers in Research 151
Computer Revolution 151
Application in biostatistics 151
Application in community or public health care and management 152
Application of computers in hospital establishments 152
Computers in Research 153
Internet 154

Bibliography 155
Index 157
