Contents

1. What is Glaucoma? 1
- Magnitude of the problem 1
- Standard definitions 2
- Pathogenesis of glaucoma
  - – Mechanical theory 2
  - – Vascular theory 3
  - – Biochemical theory 4

2. What are the Risk Factors? 8
- Risk assessment 8
- Analysis of risk factors for glaucoma 8
- Risk stratification 14

3. How to Work Up a Glaucoma Patient? 18
- Essential work up before initiating therapy 18
- History 18
- Examination 19
- Systemic investigations 36

4. When to Start Therapy? 38
- Purpose of initiating therapy 38
- Application of the concept of "glaucoma continuum" 39
- Whom to treat and whom to watch? 40
- Concept of the glaucoma colored graph 40
- Structural and/or functional damage as the basis of treatment 43
- Common mistakes 45

5. How to Set Target IOP? 50
- What is target IOP? 50
- Factors influencing target IOP 50
- Setting up a specific target 51
- Simple algorithm to calculate target IOP 59

6. Ocular Hypotensive Medications 61
- History of antiglaucoma medications 61
- Hypotensive lipids (prostaglandin analogs) 62

- Beta-blockers 72
- Alpha agonists 78
- Carbonic anhydrase inhibitors 82
- Miotics 89
- Hyperosmotic agents 93
- Preservatives in glaucoma medications 96

7. How to Start Therapy? 105
- Monocular therapeutic trial 105
- First line therapy 106
- Diurnal control 106
- When to switch or add therapy? 106
- Combination therapy 107
- Follow-up 108

8. How to Improve Compliance? 110
- Compliance, adherence, persistence 110
- Why do patients default? 110
- How to instill eye drops? 112

9. Special Situations 115
- Primary angle closure glaucoma 115
- Pediatric glaucomas 116
- Glaucoma in pregnant and lactating patients 116
- Uveitic glaucoma 118
- Neovascular glaucoma 119
- Normal tension glaucoma (NTG) 120

10. Looking Beyond IOP 123
- Why should we think beyond "intraocular pressure?" 123
- Factors other than IOP 124
- Role of lifestyle modifications 126
- Effect of medications on surgical outcome 129
