Contents

1. History of Hernia 1

Open Anterior Hernia Repair 3
Open Preperitoneal Posterior Approach 4
Laparoscopic Approaches 5
Synthetic Material 6
Ventral Hernia 6
History of Hiatal Hernia Surgery 8
Hiatal Hernia before the 20th Century 8
Hiatal Hernia in the First Half of the 20th Century 9
Hiatal Hernia in the Second Half of the 20th Century 10

2. Laparoscopic Imaging Systems 17

Laparoscopic Trolley 17
Imaging Systems 18
I. The Light Source 18
II. Light Cable 24
III. Telescope 28
IV. Laparoscopic Camera 29
V. Laparoscopic Video Monitor 32
Television Systems 33
Three-dimensional Vision 36
Invention of Ideal Shadow in Laparoscopic Surgery 38
Three-dimensional Video Systems 38
Advancement in TV System Technology 40

3. Laparoscopic Equipment and Instruments 42

Insufflation System 42
Energy Source System 42
Ultrasonic Energy 44
Operative Hand Instrument 44
Instruments for Laparoscopic Hernia Repair 45
Dissecting and Grasping Forceps 50
Hernia Stapler, Endoanchor and Tacker 54
Port Closure Techniques and Devices 55
Complication of the Use of Laparoscopic Instruments 56

4. Laparoscopic Tissue Approximation Techniques and the Art of Endosuturing 58

Laparoscopic Suturing and Knotting 58
Sutures 59
Laparoscopic Needle 60
Types of Laparoscopic Surgical Knots 60
A Pre-tied Loop 67
Extracorporeal Knot for Continuous Structure 68
Laparoscopic Intracorporeal Suturing 68
Instrumentation 68

Needle Control 68
Surgeons Knot 70
Square Knot 72
Tumble Square Knot 72
Continuous Suturing 72
Aberdeen Termination 74
Interrupted Sutures 74
Clipping 74
Anastomosis 75
Techniques to Assist in Control of Bleeding 75

5. Prosthetic Mesh Material **78**

Rationale of Using Prosthetic Mesh 79
Classification of Prosthetic Mesh 79
Prosthetic Mesh Materials 79
Ideal Prosthesis 79
Clinical Decision-making 80
Prosthetic Materials 82
Polypropylene Mesh (PPM) 83
Monofilament Polypropylene (Marlex, Prolene) 83
Polypropylene-Based Prostheses 84
Polyester (Dacron/Mersilene) Mesh 85
Polyester-Based Prostheses 86
Expanded Polytetrafluoroethylene 86
Problems with Visceral Exposure 87
Mixed-Component Prostheses 89
Natural Biological Prostheses 89
Human Versus Non-human Tissue 91
Bioresorbable Mesh 91
Heavyweight Small Porous Versus Lightweight Large Porous Mesh 91
Special Designed Mesh 92
Absorbable Meshes 92
Complications and Techniques 92

6. Laparoscopic Transabdominal Preperitoneal (TAPP) Repair of Inguinal Hernia **95**

Nyhus Classification of Groin Hernias 97
Indications for TAPP 97
Laparoscopic Versus Open Repair 98
Laparoscopic Anatomy 99
Patient Selection 102
Steps of TAPP 102
Preparation of Patient 103
Operation Room Set-up and Positioning 103
Anesthesia 105
Incisions 105
Creation of Pneumoperitoneum 106
Port Placement 106
Diagnostic Laparoscopy 107
Operative Procedure 108
Preparation and Placement of the Mesh 116
Peritoneal Closure 127
Ending of the Operation 129

Wound Closures 129
Intraoperative Precautions 131
Postoperative Management 132
Complications 133

7. Totally Extraperitoneal (TEP) Hernia Repair 137

Laparoscopic Approaches 138
Anesthesia 138
Preoperative Management 139
Choosing the Right Approach 142
Operative Room Set-up 143
Positioning 143
Totally Extraperitoneal Techniques 143
Trocar Placement 148
Dissection of the Inguinal Floor 150
Skeletonization (Parietalization) of Spermatic Cord 155
Peritoneal Tears (Defects) 155
Placement of a Large Mesh 155
Fixation of the Mesh 157
Points of Fixation 157
Three-mesh Fixation with the Use of Fibrin Glue/Tissue Glue 159
Evacuation of the Carbon Dioxide 161
Port Closure 161
Intraoperative Precautions 161
Postoperative Care 162
Complications 162

8. Laparoscopic Repair of Recurrent Inguinal Hernias 167

Etiology (Causes) and Prevention of Recurrence 168
Mechanism of Hernia Recurrence 172
Presentation and Recognition 173
Rationale 173
Indications and Contraindications 173
Advantages and Disadvantages 174
Approach Selection 174
Surgical Techniques to Treat Recurrent Inguinal Hernia 175
Tips and Comments 176
Totally Extraperitoneal Approach for Recurrent Inguinal Hernia 176
Transabdominal Preperitoneal Approach 182
Complications 185
Discussion 185

9. Laparoscopic Repair of Ventral Hernia 190

Etiology 190
Rationale 192
Advantages for Laparoscopic Ventral Hernia Repair (LVHR) 192
Indication 192
Contraindication 193
Clinical Presentation 194
Patient Selection 194
Preoperative Management: Preoperative Planning 194
Anatomical Consideration 198

Operative Procedures 200
First Technique 203
Second Technique 212
Postoperative Care 212
Meshes in Ventral Hernia 213
Complication 214
Discussion 217

10. Laparoscopic Repair of Hiatal Hernia **223**

Surgical Anatomy 223
Classification 224
Etiology—The Natural History 226
Incidence 227
Clinical Presentation 227
Indications for Surgery 228
Contraindications 229
Preoperative Management 229
Surgical Technique 232
Operative Procedures 234
Postoperative Management 240
Complications 240
Recommendations to Avoid Complication 241

Index 245
