Contents

1. Introduction **1-4**

2. Form, Structure and Peculiarities of Bone **5-16**
Periosteum 6; Tubular bones and flat bones 7; Membranous bone and endochondral bone 7; Organization of bone 8; Bone cells 9; Bone remodeling and skeletal homeostasis 11; Bone mineralization 12; Ossification and bone development 13; Appositional bone formation 14; Bone morphogenetic proteins and other growth factors 15

3. Fracture Healing: Relation to Bone Grafting **17-30**
An overview of existing concepts 19; Discussion 27

4. Cartilage **31-48**
Hyaline Cartilage 32

5. Transplantation of Autologous Bone **49-76**
Current concepts 50; Laboratory investigations 56

6. Bone Allografts **77-118**
History of bone allograft (homograft) transplantation 78; Fresh allografts 78; Preserved allografts 82; Chemically preserved bone 83; Frozen and freeze-dried bone allografts 83; Cancellous bone allografts 84; Cortical bone allografts 84; Immunology of allogeneic bone transplantation 85; Laboratory measurements of immunologic response 86; Agglutination 87; Cellular participation in immune response 87; Transplantation immunology and bone grafting 89; A, B, O and Rh systems 90; Fresh (untreated) bone allografts 91; Bone allografts for clinical transplantation 92; Particulate bone allografts 93; Demineralized particulate bone 96; Structural bone allografts 97; Cancellous bone allografts 97; Cortical bone allografts 98; Clinical use of freeze-dried bone plate allografts 99; Studies of retrieved specimens 101; Intercalary allografts 102; Osteochondral allografts 104; Clinical applications 107; Revision arthroplasties 107; Proximal femur allograft 108; Knee joint 109; Vascularized bone allografts 110

7. Bone Xenografts **119-130**
Ivory and cow horn 121; Sterilization and freezing 123; OS purum 123; Deproteinized bone 123; Kiel bone 124; Oswestry bone 126; Xenografts combined with autologous bone marrow 126

8. Transplantation of Autologous Cartilage and Chondrocytes **131-136**

9. Transplantation of Allogeneic Cartilage **137-150**
General considerations 138

10. Tendons, Ligaments and Membranes **151-180**
Complications and failures 169

11. Bone Grafts in Spine Stabilization **181-198**

12. Limb Saving Procedures **199-218**
History 200; Structural allografts 201

13. Tissue Banking **219-252**
Selection of the donors and studies designed to safeguard the recipients 222; Microbiologic studies of the donor and bone allografts 225; Autopsy 227; Discussion247

14. Tissue Engineering **253-263**
Growth factors 259; New modulatory agents 259

Index ***265***
