Contents

1. Introduction **1**

2. Gross Anatomy of the TMJ **3**

Condyle 3
Mandibular Fossa 4
Interarticular Disk 6
Posterior Attachment (Retrodiscal Tissues) 6
TMJ Bony Relationships 6

3. Classification of Temporomandibular Joint Disorders **9**

4. Abnormalities of the TMJ **11**

Developmental Abnormalities 11
Soft Tissue Abnormalities 17
Remodeling and Arthritic Conditions 21
Degenerative Joint Disease 22
Rheumatoid Arthritis 26
Juvenile Chronic Arthritis 27
Psoriatic Arthritis and Ankylosing Spondylitis 28
Septic Arthritis 29
Synovial Chondromatosis 30
Chondrocalcinosis 31
Trauma 31
Dislocation 32
Fracture 33
Ankylosis 34
Tumors 35

5. Diagnostic Imaging of the TMJ **38**

Hard Tissue Imaging 38
Conventional Tomography 43
Soft Tissue Imaging 45
Magnetic Resonance Imaging 45

6. Plain Film Imaging and Tomography **48**

Submentovertical (Axial) Projection 48
Lateral Projections 49
Transpharyngeal Projection 51
Frontal Projections 52
Panoramic Views 53
Tomography 54

Interpretation of Findings 55
Radiation Dosimetry 57
Selection of Radiographic Technique 57

7. Computed Tomography 58

CT Scanning (Technical Considerations) 58
TMJ CT Scanning (Rationale) 61
CT Number Highlighting (Blink Mode) 62
Minimizing Adverse Effects of Highlighting 64
Edge Response Function (ERF) 64
Minimizing Adverse Effects of ERF 65
Intradiscal Inhomogeneities 65
Minimizing Adverse Effects of Intradiscal Inhomogeneities 65
Three-dimensional CT Reconstructions 65

8. Arthrography of the Inferior Joint Space of the Temporomandibular Joint 67

Indications for Arthrography 67
Technique of TMJ Arthrography 68
Post-Arthrography Complications 70
Contrast Material 71
Interpreting the Arthrogram 71
Internal Derangements 72
Miscellaneous Uses of TMJ Arthrography 75

9. Double Contrast Arthrography 77

Development of Technique 77
Equipment and Technique 77
Local Anesthetic and Joint Puncture 78
Arthrographic Findings 83
Post-treatment Imaging 91
Complications of Double Contrast Arthrography 92
Comparison between Double and Single Contrast Arthrography 93

10. Digital Subtraction Arthrography 95

Digital Imaging 95
Equipment for Digital Radiography 96
Technique for Digital Subtraction Arthrography and Task-Oriented Digital Imaging 98
Internal Derangements 99
Inflammatory Disease 100
Degenerative Disease 100
Advantages of Digital Subtraction Arthrography 101

11. Magnetic Resonance Imaging 103

Physical Principles 103
Imaging Technology 105
Instrumentation 106
Magnetic Resonance Imaging of the TMJ—Techniques 108
Normal Magnetic Resonance Image Anatomy of TMJ 111
Magnetic Resonance Imaging of Internal Derangement 113
MRI Characteristics of Disk Displacement 113
Future Perspectives 118

12. Nuclear Medicine Imaging 119

Radiopharmaceutical 119
Instrumentation 120
Imaging of the TMJ 120
Image Interpretation 121
Image Correlation 123

13. Selection of Imaging Modalities for Patients Presenting with Symptoms of Internal Derangement 126

Screening Modalities 127
Imaging Diagnosis of Internal Derangement 128
Arthroscopy 129

14. Imaging of the Temporomandibular Joint in Rheumatic Disease 130

Rheumatoid Arthritis 130
Involvement of TMJ 131
Plain Film and Panoramic Radiography 132
Tomography 133
Computed Tomography 135
Arthrography 136
Magnetic Resonance Imaging (MRI) 137
Scintigraphy 139

15. Imaging of the Temporomandibular Joint in Juvenile Rheumatoid Arthritis 145

Juvenile Rheumatoid Arthritis 145
Involvement of TMJ and Jaw Skeleton 147

Bibliography 151
