Contents

1. **Introduction** 1

2. **Methods of Recording a Case History** 4
   - Steps in case history taking 4
   - Guidelines for taking case history 4

3. **General Information** 7
   - Patient registration number 7
   - Date 7
   - Name 7
   - Age 8
   - Sex 10
   - Education 12
   - Address 12
   - Occupation 13
   - Religion 14

4. **Chief Complaint** 15

5. **History of Present Illness** 17
   - Detail history of particular symptoms 18

6. **Previous Dental History** 44

7. **Medical History** 46
   - Features of medical history 46
   - Family history 49

8. **Personal History** 50
   - Oral habits 50
   - Oral hygiene habits 72
   - Adverse habits 72
   - Diet history 72

9. **Clinical Examination** 81
   - General examination 82

10. Extraoral Examination 91

- Skin 91
- Head 91
- Facial form 92
- Nose, paranasal sinuses, external ear and nasal mucosa 93
- Lips 93
- Cheeks 94
- Lymph nodes 94
- Temporomandibular joint 99
- Muscles of mastication 101
- Salivary glands 104

11. Intraoral Examination 106

- Soft tissue examination 106
- Examination of swelling 113
- Examination of ulcer 114
- Examination of lymph nodes 116
- Periodontal examination 116
- Hard tissue examination 124

12. Establishing the Diagnosis 140

- Suggested action approach 140

13. Investigations 142

- Radiographic investigations 142
- Histopathological investigations 148
- Pulp vitality testing 149

14. Final Diagnosis 151

- Critical thinking skills 152
- Types of diagnostic tests 153

15. Formulating a Comprehensive Treatment Plan 155

- Phase I: Emergency phase 156
- Phase II: Preventive phase 156
- Phase III: Promotive phase 158
- Phase IV: Curative phase 160
- Phase V: Rehabilitation phase 160
- Phase VI: Maintenance phase 161

16. Levels of Prevention 163

- Modes of intervention 164
- Levels of prevention for dental caries 165

- Levels of prevention for periodontal disease 166
- Prevention of dental trauma 168
- Levels of prevention for oral cancer 169
- Levels of prevention for dental fluorosis 170
- Levels of prevention of malocclusion 170

17. Dental Indices 171

- Definition 172
- Properties of an ideal index 172
- Classification of indices 173
- Purpose and uses of an index 173
- Indices commonly used in dentistry 175
- Indices used in assessing oral hygiene 178
- Indices used in assessing plaque and debris 187
- Indices used in assessing calculus 193
- Indices used in assessing gingival inflammation 194
- Indices used in assessing gingival bleeding 197
- Indices used in assessing periodontal diseases 200
- Scoring criteria of Russell's periodontal index 201
- Indices used in assessing dental caries 219
- Indices used in assessing dental fluorosis 230
- Indices used in assessing malocclusion 238
- Indices used in assessing tooth wear 240

18. Preventive Therapy for Dental Caries 244

- Pit and fissure sealant and topical fluorides 244
- Aqueous solutions used as pit and fissures sealant 249

19. Sterilization in the Dental Practice 256

- Sterile 256
- Sterilization 256
- Disinfection considerations in dentistry 263
- Classification of patient-care items spaulding system (1972) 263
- Infection control in dental practice 264
- Disinfection of orthodontic instrument 266
- Disinfection of impression 266
- Disinfection of prosthesis and records 267
